

# CONSULTING

International Consulting Services, Inc participates in the process of planning, designing and construction of physical facilities with a different perspective. We focus on complete project management, the quality of the finished product and the life cycle costs of constructed facilities, rather than simply the initial cost of construction itself.

Our specialized knowledge in building enclosures is essential in large and complicated projects. Saving money on planning or the design process will be a false economy if the results are unwarranted construction costs or excessive cost of operation and maintenance.

We are responsive to our customer's desires, assisting in marketing their specialties and improving the productivity and quality of their work. Communication, scheduling and quality assurance are given particular significance.

A variety of possibilities are considered in the conceptual design and planning stages. This includes the introduction of new materials and construction processes that can result in faster and less expensive building enclosures consistent with desired performance.

As a direct result of our extensive and hands-on approach ICS can offer its clients options and solutions for each project condition, considering aesthetics, economy, schedule and quality. It is to be noted that quality of work and performance are critically important to ICS, as it is our clients who live with the results.
